Who It Is For

-  Android users with 6.0+ devices
-  Fitness enthusiasts tracking workouts
-  Health-conscious individuals monitoring vitals
-  Runners needing GPS tracking
-  Users requiring fall detection alerts

Who It Is Not For

-  iOS users (no iOS support)
-  Users prioritizing long battery life
-  Those without Android 6.0+ devices

Trade Offs to Consider

-  No LTE connectivity for always-on data
-  Limited app ecosystem compared to Apple Watch
-  Shorter battery life than competitors
-  No built-in voice assistant
-  Higher price than basic smartwatches

How It Compares

- Larger screen than most smartwatches
- Shorter battery life compared to competitors
- Wear OS offers broader app support
- Better water resistance than many models
- Includes ECG and fall detection
- Higher price than basic models

Choose This If...

- ✓ Android user with 6.0+ device
- ✓ Need ECG and blood pressure monitoring
- ✓ Require GPS for outdoor activities
- ✓ Need fall detection alerts

Skip This If...

- ✗ iOS user (no iOS support)
- ✗ Prioritize long battery life
- ✗ Require LTE connectivity
