

Samsung Galaxy Watch 4 Classic Smartwatch

QUICK BUYER GUIDE

Android users seeking health tracking with ECG, GPS, and fitness features

At a Glance Specs

BATTERY LIFE

361 milliamp hours for daily use

CONNECTIVITY

Bluetooth 5.0, WiFi, and NFC

COMPATIBILITY

Only works with Android smartphones

SCREEN SIZE

1.4-inch round display

STORAGE

16 GB internal memory

WEIGHT

0.423 ounces for lightweight wear

Who It Is For

-  Android users prioritizing health tracking
-  Fitness enthusiasts needing auto workout tracking
-  Sleep analysts monitoring sleep cycles
-  Outdoor adventurers requiring GPS navigation
-  Fall detection users for safety
-  ECG monitors for heart health tracking

Who It Is Not For

-  Apple iPhone users
-  Users without Android smartphones
-  Those without fall detection needs
-  Non-GPS reliant travelers
-  ECG feature non-essential buyers
-  Bluetooth connectivity requirements

Trade Offs to Consider

-  Battery life limited to daily use
-  Android-only compatibility restriction
-  No Apple ecosystem integration
-  Fall detection requires active monitoring
-  GPS accuracy depends on signal strength
-  ECG readings need medical consultation

How It Compares

- Compare with Apple Watch for Android exclusivity
- Similar to Fitbit for health tracking features
- Matches Garmin for GPS navigation
- Competes with Samsung Galaxy Watch 5 for newer models
- Comparable to Huawei for ECG capabilities
- Similar to TicWatch for Android integration

Choose This If...

- ✓ You need health monitoring features
- ✓ You prioritize GPS navigation
- ✓ You use Android smartphones
- ✓ You want fall detection alerts
- ✓ You need ECG heart analysis
- ✓ You prefer lightweight wear

Skip This If...

- ✗ You require Apple ecosystem integration
- ✗ You don't need fall detection
- ✗ You prefer longer battery life
- ✗ You need GPS without cellular
- ✗ You lack Android compatibility
- ✗ You prioritize medical-grade ECG
